JOHN JAYFERSON MATA

Information Technology

Makati, Philippines | johnjayferson2@gmail.com | +639682844430 | cv-john-mata.vercel.app

Graduating Information Technology student specializing in full-stack web development and system integration. Experienced in building modern web applications, integrating APIs, and modernizing information systems to improve business workflows. Proficient in TypeScript, JavaScript, React, Next.js, and Node.js, with hands-on experience in Git, testing, technical documentation, and AI-assisted development.

RELEVANT PROJECTS

Visual Monitoring System |*Full-Stack Developer*

- AI-assisted redevelopment of an internal SharePoint-based order monitoring system into a modern web application integrating order data from SAP and other MCPs, serving 50+ users.
- Structured system requirements and architecture using project charter, business requirements, and technical documentation following SDLC practices.
- https://vimos-web.johnjayferson2.workers.dev/

Two-way SMS Paging System | Full Stack Developer

- Developed a full-stack web-based paging system for students and faculty, with role-based workflows for students, professors, program heads, and administrators.
- Integrated two-way SMS notifications using the Semaphore API to support real-time paging requests, status updates, and faculty responses.
- Implemented MySQL-backed authentication, scheduling, request tracking, profile management, and automated paging-status workflows using PHP, JavaScript, and MySQL.

Government-Affiliated HCM System | *Frontend Developer • Business Analyst*

- Refined and enhanced frontend components of a large-scale HCM system, addressing UI inconsistencies and functional requirements to improve usability and maintainability before handover to the full-time development team.
- Documented daily Minutes of Meetings (MOMs) to capture project discussions, requirements, decisions, and action items.

EXPERIENCE

Full-Stack Developer Intern|Microgenesis Business Systems — Philippines | 2026

- Developed and enhanced web-based system features by translating business and stakeholder requirements into functional interfaces and workflows.
- Applied Git-based development, testing, troubleshooting, and technical documentation to support system development and handover.
